Sir FRANCIS NORTH, Lord Chief Justice.

Master Justice { WINDHAM.
 { ATKINS.
 { ELLIS.

IV. In the EXCHEQUER.

Sir EDWARD TURNER, Lord Chief Baron.

Master Baron { LITTLETON.
 { THURLAND.
 { BERTIE.

Sir WILLIAM JONES, Attorney-
Sir FRANCIS WININGTON, Solicitor-
General.

The Law is a certain Rule which proceeds from the mind of God, perswading that which is right, and forbidding wrong.

The Advocate that pleads for the Rich in an ill cause, must renounce friendship with Verity and Honesty.

A Good Judge is the Commonwealths Physician, and a Sanctuary to the Oppressed.

Dormit aliquando Lex, moritur nunquam.

A TIDE-TABLE perpetual.

 H. M.
 Age to be
 added.

What Moons make High-water in any
the following places.

1	16	0	48						
2	17	1	36						
3	18	2	24						
4	19	3	12	South.	Southampt. Quinborow	3	0	0	
5	20	4	0	North.	Portsmouth, Spithead	3	0	0	
6	21	4	48	S. S. W.	Gravesend, Scilly	1	30		
7	22	5	36	S. W.	London, Timmouth	3	0		
8	23	6	24	W. by S.	Newcastle, Falmouth	5	15		
9	24	7	12	E. and W.	Plymouth, Lyn, Hull	6	0		
10	25	8	0	E. by S.	Bristol, Foulness	6	45		
11	26	8	48	E. S. E.	Milford, Waterford	7	30		
12	27	9	36	S. E. by E.	Portland, Dublin	8	15		
13	28	10	24	S. E.	Pool, Orkney, Carnes	9	0		
14	29	11	12	S. S. E.	Dover, Harwich	10	30		
15	30	0	0	S. by E.	Winchelsey, Rye	11	15		

The Use of this TABLE.

To know the time of High-water, and what Moon makes it
 so in any of these places, you must get the Age of the
 Moon, and that directs you to certain Hours and Minutes in
 the next Column unto it, which are to be added to the Hours
 and Minutes you find against the place you would know where
 it is High-water.

As for Example:

I would know what time it is High-water at *London-bridge*
 on Jan. 1. 1676. Against the said day in the Column of the
 Moons Age, I find the Moon to be 26 days old; and against
 26 in the third Column above, I find 8 h. 48 m. and against
 London in the last Column, I find 3 h. 0 m. which added
 together, make 11 h. 48 m. the time of High-water at London
 on Jan. 1. 1676. and that an East and South-East Moon makes
 it so. You may do so in the rest.

The

The Moons Age for every day.

Month-day	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.

*KINGS are our Nursing Fathers; Subjects do
 But Legal Sons: Their Duty sets them Free.
 And true Obedience to the Royal Law.
 Makes Stranger Princes of both stand in awe.
 But if Rebellion they permit to grow,
 That bodes both Kings and Subjects Overthrow.*

Omnia Potestas a Deo est

A TABLE of TERMS for the Year 1676.

Returns, or Essoin days.	Days of Exception.	Returns Brevium.	Days of Ap- pearance.

*The Law installeth Vertue; and is known,
 For Vertuous Persons a Protection sure:
 It corrects Vice, and ever doth disown
 The Vile and Base; yet, doth their Madness cure.
 If Wasps do break the Web by craft or strength;
 God's Law, the stoutest Sinner, mee's at length.*

Salus Civitatis in Legibus est.

JANUARY hath XXXI days.

The Year's begun: the three Superiours Trine;
Sol, *Chronus* Squarès; *Hor Mars* and *Jove* do join.
 Distemper'd *Air* and *Actions* issue hence:
 They're happy now, 'gainst *Pious Frauds* can fence.
 While *Architects* a low Foundation lay,
 If they intend to raise a *Structure* high.

OBSERVATIONS.

It is not *Gassendus's* want of patience (which he vainly complains of) that can render the *Influences* of the *Stars* either *truthless* or *useless*. Nor ought the *impatience* and *temerity* of an *Adversary*, though never so great or learned, to be admitted of force sufficient to *baffle* or *eclipse* the meanest *Truth* of *God* and *Nature*.

If the *Quartile* of *Saturn* and *Venus* commonly induce *moisture*, it may do so now; but not so much as in some other parts of the *Heavens*. Yet a *weeping* beginning of the year, with some *Caelestial Sighs* also, I do expect. Sometime after, a *frosty* and *pleasant Air*: but a little before and after the *Full Moon*, a *notable change* of *Air* happens; possibly by *Snow*, with much *wind* and *moisture*.

FEBRUARY hath XXVIII days

Most of this Month is gravely governed
By subtile *Chronus* ; whose designs are sped
By *Sol* and *Stilbon* : *Mars* rebellious grows,
And strikes (in's passion) *Friends*, as well as *Foes*.
In th' *Air* they'll raise an *Influence* so great,
Will shake *Dame Vesta* with a *Feaver-Fit*.

OBSERVATIONS.

The beginning of this Month somewhat *windy*, with a fall of moisture also ; but it will be, generally, *frosty* and *windy*, yet not a very unpleasant Month. It should prove moderately *warm* also about the latter part of it ; with some *fits*, now and then, of *winds* and *rain*.

The chiefest changes of the weather, will, I conceive, happen about the 5, 6, and 7; and also about the 9, 15, 16 days, and a little after the *Full Moon*. The best of men must own the Motto, *Scimus ex parte*.

MARCH hath xxxi days.

Ho! Wondering Mortals! If the Nights be clear,
Observe kind *Hermes*, now he doth appear.
Be quick; improve your *time* in what ye do,
Or else you'll lose your *Oyl* and *Labour* too:
He's soon obscured. So some *active* Men,
Do *briskly* rise, and as soon *set* agen.

OBSERVATIONS.

March comes in with blustering dry winds, caused not so much from *Mercury's* Visibility, (though a thing very rare in it self) as from four of the seven Planets being in dry Signs, and *Mercury* his being Stationary in Sextile of *Mars*. Near the Full Moon, Winds, Rain or Snow, and that remarkable; *Saturn* and *Venus* both rise with the *Pleiades*. I expect a turbulent season in earnest, with frosty Air intermixed: Then pleasant again, with kind and seasonable Air, until toward the latter end; when there will be a small alteration to winds and showers again.
Quæ nocent, docent.

APRIL hath xxx days.

Grave *Chronus*, near the *Pleiades*, doth meet
His *Royal Master*: *Yields* (as is most fit)
His *paler light* up to him. So they move,
Like *Prince and Subject*, in the *paths of love*.
Yet, *Bussing Actions*, *Blustering weather* make
In th' *lower World*, for th' *Constellation's* sake.

OBSERVATIONS.

Turbulent and stormy at the beginning of the Month, but soon over; and generally *curious warm* springing weather. Except the *Conjunction* of the *Sun* and *Saturn* toward the latter end, rising together with the *Pleiades*, and a *Quadrate* of *Jupiter* and *Mercury* then, cause a *cloudy, windy, troubled* Air, with *cold mists* and *rain*, &c. But long this cannot continue, nor yet to any great damage to the *forward Spring*, &c. The *Sun* is gotten a little too high for that.

MAY hath xxxi days.

Sick *Jove* Salutes kind *Phœbus* by a *Trine*,
And Courts Quaint *Hermes*, to Petition Him,
To Grant his *Princely Charter*, to Maintain
His *Wounded Honour*. (*Jove* runs back a main.)
Sol hears the *Motion*; Refers all to *Mars*;
Who *Certifies*, He's cause of *Pious Fears*.

OBSERVATIONS.

Notwithstanding the glorious *Trine* of the *Sun* and *Jupiter*, I expect a *blustering* and *tempestuous* beginning of this Month: but it passeth over with the *New Moon*. About the *First Quarter*, a windy and moist Air; but about the *Full*, and a little after, expect a notable change of Air, viz. a showry season, with Hail and Thunder in many places. The *Quadrate* of *Jupiter* and *Mars* in those points of Heaven where it now happens, is remarkable in earnest, I'll assure you.

JUNE hath xxx days.

On the first day bright *Phæbus* loseth light;
And, in th' *West-Indies*, they will have the sight
Of almost *total darkness*. *Venus*, by day
Will shew her self, in all her *brave array*.

Two *Prodigies* at once! May *London* be
Thrice happy now. --- The *Sign's* in *Gemini*.

OBSERVATIONS.

☉ Eclipsed visible.

A *Solar Eclipse* in *Gemini*
ushers in this Month: such *E-*
clipses are not kind either to
London or *England*. It will oc-
casion, or precede rather, *hot*
weather, and somewhat else;

St. Barnabas.

the fiery Planet *Mars* is in A-
spect unto it.

Notable *dry weather*, with
brisk winds, until toward the
Full Moon: Then sudden *hasty*
Showers; and at the latter end,
remarkable *thunder* and *storms*,
like thole of *July 16 74*, that did
so great injury in *Hoiland*,
France, *Flanders*, &c. A *Ful-*
gure & *tempestate*, libera nos
Domine.

JULY hath xxxi days.

The two Malignants now together join
Unhappily, in fruitful Ireland's Sign:
From Sword and Sicknes let that Nation be
(With all its fellow-Countries) fully free.
Be they but wise and loyal, then they may
Frustrate thole Influences that o'er them sway.

OBSERVATIONS.

July begins with curious
Harvest weather ; and a little
after, we shall have some short
fits of Hail, Thunder and Light-
ning, (doing no great mischief)
by reason of the Conjunction
of Saturn and Mars near the
Longitudinaty place of the
Pleiades ; which will sometimes
occasion dark Noons, and moist
and misty Nights and Morn-
ings.

Great Rain, with Thunder
and Lightning at the latter end
of the Month ; God grant no
injury be done thereby to the
hopeful Harvest.

AUGUST hath xxxi days.

The Sun and Falcifer each other Square,
From parts of Heaven that most active are;
And so move angry Atoms in Men's Minds;
And, in the great world, sturdy Showers and Winds:
Both doing mischief; this, in Pol'tique things;
Th' other, his Poison through the Harvest flings.

OBSERVATIONS.

How? Shall we have great
store of dry winds alone, or,
some sudden gluts of rain with
them, at the beginning of this
month? The Quadrate of the
Sun and Saturn is for turbulent
Air, perhaps Thunder and re-
mission of Heat. After that,
excellent Harvest weather for a
little time: but from the Last
Quarter to the end, generally
various and uncertain weather,
with Winds, Rain, and cloudy
Skie, doing some injury to the
scarce-gotten-in-Harvest.

SEPTEMBER hath xxx days.

After a tedious going backward, *Four*
 Being got direct, doth *Trine* the *Queen of Love*.
 But, such their *sad Condition* is, that they
 Can little do: nay, can but little say
 Unto each other's profit. *Ladies!* now,
 Ye may be flatter'd; but you'll for it rue.

OBSERVATIONS.

This is like to prove a remiss
 and cloudy Month also: still
Saturn is with the *Pleiades*.
 It is a gross Errour in *Gaf-*
sendus, or any else, to assert
 they have known the Planets to
 pass by that turbulent Constel-
 lation without exciting moi-
 sture. Much wind also the Stars
 do now produce; but this chiefly
 a little before the *Full Moon*,
 and likewise toward the latter
 end of the Month. Some cool,
 but pleasant Frosty Mornings,
 now and then, between those
 two fits.

OCTOBER hath xxx days.

*Saturn in Taurus still, and Retrograde ;
To meet bold Hermes by an Opposition,
His Eldership, at this time, now is made :
So Seniors stoop to Minors in Derision.
Still in Scorpio wont receive a baffle :
Who'll ride a swift Horse, must use bit and snaffle.*

OBSERVATIONS.

Not an unseasonable, but rather a kind Seed-time, October now comes blessed with. The Harmonious Aspects of the Planets are of a moderate effect in the Air: Yet upon the Opposition of Saturn and Mercury, and a little after, we shall have a notable Ague-fit, which will go near to convert many Hereticks in Cœlestial Influences unto a good opinion of Astrology.

Very kind Air, and pleasing Actions, seem to conclude the Month.

November.

NOVEMBER hath xxx days

Retrograde *Chronus* doth oppose the Sun,
And some great *Statist* will the *Influence* feel;
Bright *Sol's* eclips'd too, e'er the *Month* be done:
None grieve to see the *Faulty-Great-Ones* reel.
Who wound *bright Justice*, cut and tear her *Banner*,
Do stand too long in Place of *Trust* and *Honour*.

OBSERVATIONS.

A great *Apertio Portarum* begins the Month; such an one, as is not commonly known: Pray do not think that I fix it upon the very first day thereof; for if it happen a little later, my Prediction is not much to be faulted; but if it prove that no such thing happen at all, I shall then be content to stand the storm of your indignation: pour it upon me, and spare not: but my revenge will be (not to quarrel the Stars, they are Gods glorious Host, and above me) but, to renounce the study of that part of Astrology that concerns the weather, as uncertain and void of verity.

☉ Eclipsed visible.

DECEMBER hath xxxi days.

Now, to conclude, Here Mars doth Sol oppose;
And Chronus, Venus, as he backward goes:
Mavors and Hermes so salute each other.
The Time's unquiet: Brother unto Brother
Are Foes in earnest: Scandal is in fashion
About this time (almost) in every Nation.

OBSERVATIONS.

A Month of various Air; sometimes much Snow or Rain, other times great and turbulent Winds, with remission o cold, &c. Nay, I dare presage a windy and troubled Skie at Christmas. I am a Disquisitor of Truth; and will neither defend Stofler's Errour of 1524. nor theirs of 1186. which Gasfendus so much triumphs over. Nor dare I consent to the Vanities, Cheats and Forgeries which are promoted in this Age under pretence of Astrology: Astrologers are subject to failings equally with others. But no man ought to be afraid of coming to a knowledge of the Truth, because Errour, like a sawcy Forger, stands at the Gate.

Law DEO

The GOVERNMENT of the MOON over the Body of Man, as she passeth the twelve ZODIACAL CONSTELLATIONS.

A DYSTICH on the twelve Signs, and on their several Significations.

A TABLE

Of the FOUR QUARTERS of the YEAR.
Of the SPRING.

THE Spring, the most delightful Season of the whole year, taketh its beginning from the Sun his entring into the Equinoctial Sign *Aries*, which this year happens on *March* the ninth day, at 3 hours 38 minutes P. M. or at noon, at which time the Coelestial *Virgin* ascends the Horoscope in the Latitude of *London* in particular, and so over all *England* generally.

This season continueth all that time the Sun passeth through the Three first Northern Signs, viz. *Aries*, *Taurus*, *Gemini*. At the beginning of this Season the Sun maketh days and nights equal all over the world; and leaving then the Inhabitants of the Southern Hemisphere, doth now refresh and revive, with his cheering beams, all those that dwell and inhabit in the Northern Hemisphere. The Rulers of this Quarter are, according to Astrology, *Mars*, *Venus*, *Mercury*, and they signify Vigor, Delight, and Mutability; and accordingly while the Sun is in *Aries*, all Vegetables put forth their leaves and blossoms, and Nature shews a Spring-like Force. While the Sun is in *Taurus*, the Leaves and Flowers expand themselves after a delightful manner, and Dame *Vesta* opens her Paradise of Pleasures to all her Children, exercising both their Souls and Senses. All the time he is in *Gemini*, Natures Limners are at work; and out of the Force of *Mars* and Delights of *Venus*, paint to the world a million of pleasant Varieties, and Mankind thereby may be taught how to abate of his stock of Melancholly, by contemplating those glorious but harmless Pieces of Natures Workmanship, and need not be beholding to the conversation of treacherous company, nor yet to an exhilaration afforded from a Tavern or Musick-house. The curious Emblems of the Spring, are void of Fraud, and know not the art of Trepanning. Natures innocent Syrens tempt none to the rock of Destruction. *Ulysses* may here sit soberly, and without being bound to his Ships Mast, may delightfully open his Ears to these Charms. But now, as if God and Nature never intended that Mankind should be gluttied with the beholding of one Object continually, the glorious and youthful Spring, with all its verdant Varieties, leaves us, and we must not approach unto--- The

The Summer Season.

THE SUMMER-QUARTER begins where the Spring ends, and the Sun here mounting his *Apogæon*-Chair of Honour, is removed to his greatest distance from the Earth, making the largest quantity of Sun shine, and least portion of shadow, or (which is all one) longest Days and shortest Nights to us on this side the *Æquator*.

This season begins in the latitude of *London* this year, on June the tenth day, near half an hour past six a clock at night, and continues all that portion of time that the Sun maketh his progress through the Three last Northern Signs, viz. *Cancer*, *Leo*, *Virgo*; and the grand Rulers thereof are the *Moon*, *Sun*, and *Mercury*. The Moon here precedes the Sun in Government, and all the Births of the preceding Spring, are here swell'd to a pleasing *Dropsie*, and so continue for the first month of the Summer, and then the Sun assumes a particular (as well as a general) power of Governing; and by his great heat reduces all Vegetables from their *Anasarcal Swelling*, to a positive *Hædick Fever*; thereby ripening the Seeds of Flowers, Herbs, and Fruits, &c. And this is the work of the second month of the Summer-Season. After this excellent Office of the Suns performing, *Mercury* enters upon the Regency of the last month of this Quarter, and (*Virgo* being an Earthly Sign) he reduces all things from their *Hædick Condition* into a direct *Marasmus*: and now all things are ripe for the Sycle, and for the honest Harvest-mans levelling hand: and the Disease of this Quarter being become thus desperate, it is in vain to think to relieve its wasted Spirits by Cordials, or to hope to retrieve its almost decayed Life, by applying *Pigeons* or *Cupping-glasses*.

Do you not see how orderly the Seasons of the year are governed by the several Planets in their turns, and this according to their Natures and Qualities, as Astrologers have distinguished their Dignities? And now having seen the Death of the Spring and Summer Seasons, the only pleasant and delightful parts of the year, let us a little in the next place attend their Funerals. (that being the last office of kindless one Friend can perform for another) which will be by considering of-----

Th

The Autumnal Quarter.

THE Autumn or Harvest Quarter is the third Quarter of the year, and is the declining Equinox therein; The days and nights are now again equal all the world over, and the Sun doth irradiate the Artique and Antartique Poles equally, as he did when he began the Spring Quarter.

This Season beginneth where the Summer ends, viz. when the Sun toucheth the first point of the Equinoctial Sign *Libra*, which this year happens on September the 12th. near half an hour past ten of the clock in the morning. It continueth all the time that the Sun is perambulating through the Signs of *Libra*, *Scorpio*, and *Sagittary*: and the Governours of the Signs of this Quarter are *Venus*, *Mars*, and *Jupiter*. *Venus* bestows her Tears upon the Hearse of the deceased Summer, and thereby generates a Phoenix out of the old ones Ashes: And so for the first of these months we are made happy with a later Spring, but this not of any long continuance, but quickly fading and abating. Then *Mars* comes next, and endeavours to add heat to the moisture that *Venus* lent, the better to cherish the later Summer; but that too is soon returned by reason of the absence of the Sun, the fountain of all heat, and grand Principle of generation. But lastly *Jupiter* comes, and by his Balsamick Beams, endeavours to perfect what *Mars* and *Venus* alone could not, and so conserves the Mummial Virtue of all Plants, Herbs, Fruits, Flowers, &c. for the good of humane kind, and for the preservation of the Species of all things, at least to the end of this declining Quarter, which is as far as his gubernation extends. And so he leaves us in the next place to consider of-----

The Brumal or Winter Quarter.

THE Brumal or Winter Quarter always begins where the Harvest or Autumnal Season ends, and Astronomically commenceth when the Sun salutes the first scruple of *Capricorn*, the earth being then farthest deflected from the Suns perpendicular Rays, receiveth greatest portion of shadow

Of the Four Seasons of the Year, 1676.

dow, and least quantity of Sunshine, and so causeth shortest days and longest nights to all those that inhabit on this side the Equator. The Sun is in his *Perigæon*, or in his nearest distance to the earth, being now opposite to his *Apogæon*, which is in *Cancer*. And this year, this melancholly quarter beginneth upon the tenth day of *December* about ten a clock at night, in the Latitude of *London*, and it continueth all that quantity of time which the Sun is transiting through the Signs of *Capricorn*, *Aquarius*, and *Pisces*. The Rulers hereof are *Saturn* and *Jupiter*; but *Saturn* hath a double power to that of *Jupiter*, because *Capricorn* and *Aquarius* are both his Signs, or Mansion-houses: and all things now look with a sad and unpleasant face, and may be seen to wear the image of Death and Destruction. Now Frost, Snow, Hail, Black Clouds, Fickles, Barrenness, extremity of Cold, and all things that are negative to Delight and Pleasure, have their regency.

Thus you see how all the Seasons are made, and how by struggling and contending Interests maintain'd, and also how at last that *Saturn* is the Devourer of his own Issue; and how *Jupiter* by his gentler moisture in *Pisces*, puts us in hopes of an approaching spring. And thus by this orderly rule of the Planes through the several seasons of the Year, are we put in mind of the several parts of our life, thereunto agreeable, viz. how we pass the Spring of our Youth, the Summer of our Manhood, the Autumn of our declining Years, and the Winter of our Age; where *Saturn* with his Sythe stands ready to cut us down; and how by passing through this Vale of Misery, this natural Death, we pass to the Government of *Jupiter*, to Immortality, and to a blessed Life, where we shall behold God Almighty in Glory. But

O who shall tell! who shall describe Thy Throne,
Thou GREAT THREE-ONE!
There Thou Thy Self dost in full presence show,
Not absent from these meaner Worlds below:
No, if Thou wert, the Elements League would cease,
And all Thy Creatures break Thy Natures Peace:
The Sun would stop his Course, or gallop back,
The Stars drop out, the Poles themselves would crack,
Earth's strong Foundations would be torn in twain,
And this vast Work all ravel out again
To its first Nothingness. Comley's Dav. p. 11.

*Of the Two GREAT ECLIPSES of the SUN
which happen in this Year 1676.*

According to the *Laws* of *Astronomy*, there will happen in this Year 1676. Two Eclipses and no more, and both of them will be of the *Sun*, as may be seen by my *Ephemerides* of this Year, as also by that of the Learned *Heckerus*.

These will be two very great Eclipses in earnest, and if the Air be but favourable, will be visible, not only to us in *England*, but unto many other places in the *World*, as may be seen upon the *GLOBE*.

The *First Eclipse* will be upon the first day of *June*, about our ten of the Clock in the Morning, it will be a visible and a total Eclipse to us in *England*; (I mean as much total as the Sun can at any time be Eclipsed) and will appear to our Eyes in such a like shape as this is.

It is celebrated in 21 Degrees of *Gemini*, in the Horoscope of *London*; and there can be no danger in telling you that: It will appear an almost total Eclipse about the *Fortunate Islands*; and will be visible in *Greenland*, and in the *North-Sea*, where all that navigate may view it. To those, also, that inhabit *Cuba* and *Hispaniola*, and to sundry other *American Plantations* besides, it will appear visible.

That witty Bavarian *Johannes Angelus*, tells us, That the Decanate wherein this Famous Eclipse falls, is govern'd by the *Sun*. and that it Cabalistically declares Oblivion, Disdain, Folly, and Pleasure, and the hearing of unprofitable things. And, he expresseth it by this quaint Hieroglyphick, viz. A man with a Hawk on his right Hand, and a Pipe in his left. But to conceits of this nature, and to the tricks of the Sieve and Shewers, Key and Bible, &c. I confess I owe an equal Laith and Credit: and so I do also, to some kind of *Astrological Predictions*.

Th

Of the Eclipses this Year, 1676.

The *Second Eclipse* of the *Sun* will happen upon the *Twenty Fifth* day of *November*, about our *Eight* of the *Clock* in the *morning*; this will be a *total* and *central Eclipse*, like unto the former; and unto our *Eyes* will bear such a like *Shape* as this following Figure represents.

In the Latitude of *London* the *Sun* will rise *Eclipsed*; and if the weather be but *fair*, (of which I am a little *suspect* us, because the *Sun* and *Moon*, both of them, rise with *Stars* of a *Martial* and *Fervid* nature, in an *Asterism* inclining clouds, &c.) we may behold a great part of the *defect*, viz. *two thirds* at the least.

It is celebrated in the *14* degree of *Sagittarius*; and the Noble Planet *Jupiter*, rules the *Place Eclipsed*. And I know what *Astrologers* say unto that; but, hold it not convenient to touch upon the *String of Predictions*, lest I be thought, by some, to make unpleasant *Musick*.

This *Eclipse* will be visible, not only unto *England*, but unto many other *Kingdoms* and *Countries* also, as *Benin*, *Biafara*, *New Guinea*, *Madagascar*, *Virginia*, and likewise in the *Ethiopian Ocean*, to such as shall then *sail* there: and in sundry other parts of the *World*, as may easily be discovered on the *Globe*. And thus much of *ECLIPSES* this year.

Of the *Conjunction* of *SATURN* and *MARS*, on *July* the *Fifteenth*, this Year; and of *MARS*'s tedious *Transit* in *CANCER*, &c.

BESIDES these two famous *Solar Eclipses*, there will happen in this Year an eminent *Conjunction* of the two Malefique Planets, *Saturn* and *Mars*, with the *Pleiades*, or *Seven Stars*. It happens upon the *fifteenth* day of *July*, and may be seen in the *East* part of the *Heavens* a little after *Midnight*. It is a *Conjunction* very well worth the noting by the industrious *Astronomer*; and probably the happy *Trine* of *Jupiter* and *Venus* that

The Planets Grand Configurations 1676.

very evening, may portend a good and clear *Air* for that purpose: although I must tell you, I think it will not (for other Reasons) continue *fair* very long.

In 1646. on *June* the *12*. there happen'd a *Conjunction* of the same Planets parallel unto this in signification, at least. *Taurus* is the *Ascendent* of *Ireland*, and so it is of *Russia*, *Lorraine*, *Persia*, *Polonia Minor*, *Helvetia*, *Parthia*, &c. but I forgive myself, I must not meddle with *Predictions*.

There happens in this Year, and in part of the next, a most unusual *Transit* of *Mars* in *Cancer*, of almost eight months long, viz. from the *13* of *September* this year, to the *28* of *April* 1677. only he runs *Retrograde*, out of *Cancer* hastily into *Gemini* 26 degrees. I must not pretend to interpret what this portends: and yet I may innocently acquaint you, That *Cancer* represents *Holland*, &c. and *Gemini* is *London's* *Horoscope*.

Of the GRAND CONFIGURATIONS of the PLANETS happening in this Year, and of *MERCURY*'s tedious *Transit* through *ARIES*.

TO save the ingenious Reader a trouble, in finding out the the *Grand Configurations* of this whole Year, I shall present them to his *Eye* in the following *Scheme* and *Order*.

1	☐ ♀ ☉	6	♊ ☉	15	January	
2	♂ ♀	9	♊ ☉	15	January	
3	☐ ♀ ☉	8	♊ ☉	24	February	
4	☐ ☉ ♀	21	♊ ☉	29	March	
5	♂ ☉ ♀	15	♊ ☉	24	April	
6	☉ Eclip.	21	♊ ☉	1	June	
7	♂ ☉ ♀	17	♊ ☉	28	June	
8	♂ ♀	25	♊ ☉	15	July	
9	☐ ♀ ☉	26	♊ ☉	7	August	
10	☐ ♀ ☉	28	♊ ☉	10	September	
11	☐ ☉ ♀	1	♊ ☉	26	September	
12	♂ ☉ ♀	2	♊ ☉	3	November	
13	☉ Eclip.	4	♊ ☉	25	November	
14	♂ ☉ ♀	6	♊ ☉	15	December	

In this
Year
1676.

These Types are both false

Of the Great Transits of Mercury and Venus.

There happens also an *unusual Transit* of ♄ through ♍, the *Horoscope of Great Britain*. He begins this his unwonted progress upon *February 23.* and continues therein by motion *d.rect* and *retrograde.* until *May. 2* following.

Any one versed in *Astronomy* can tell you when he will undertake such another Progress in that *Equinoctial* and *Ficry Sign*. Would you know when this nimble Planet made the like *Perambulations*? (for he is nearly *regular* in them) I'll point out a few of them from a *larger Catalogue* that I keep constantly by me.

Aug 1649. he was in *Aries* from *February* 27. until *May* 5.

Anno 1656. he continued in *Aries* from Feb. 24. to May 3.

Anno 1662. he began this his like Journey on Febr. 28. and ended it on May 6.

Amo 1669. he was in *Aries* again from *February 25.* until *May 4.* following.

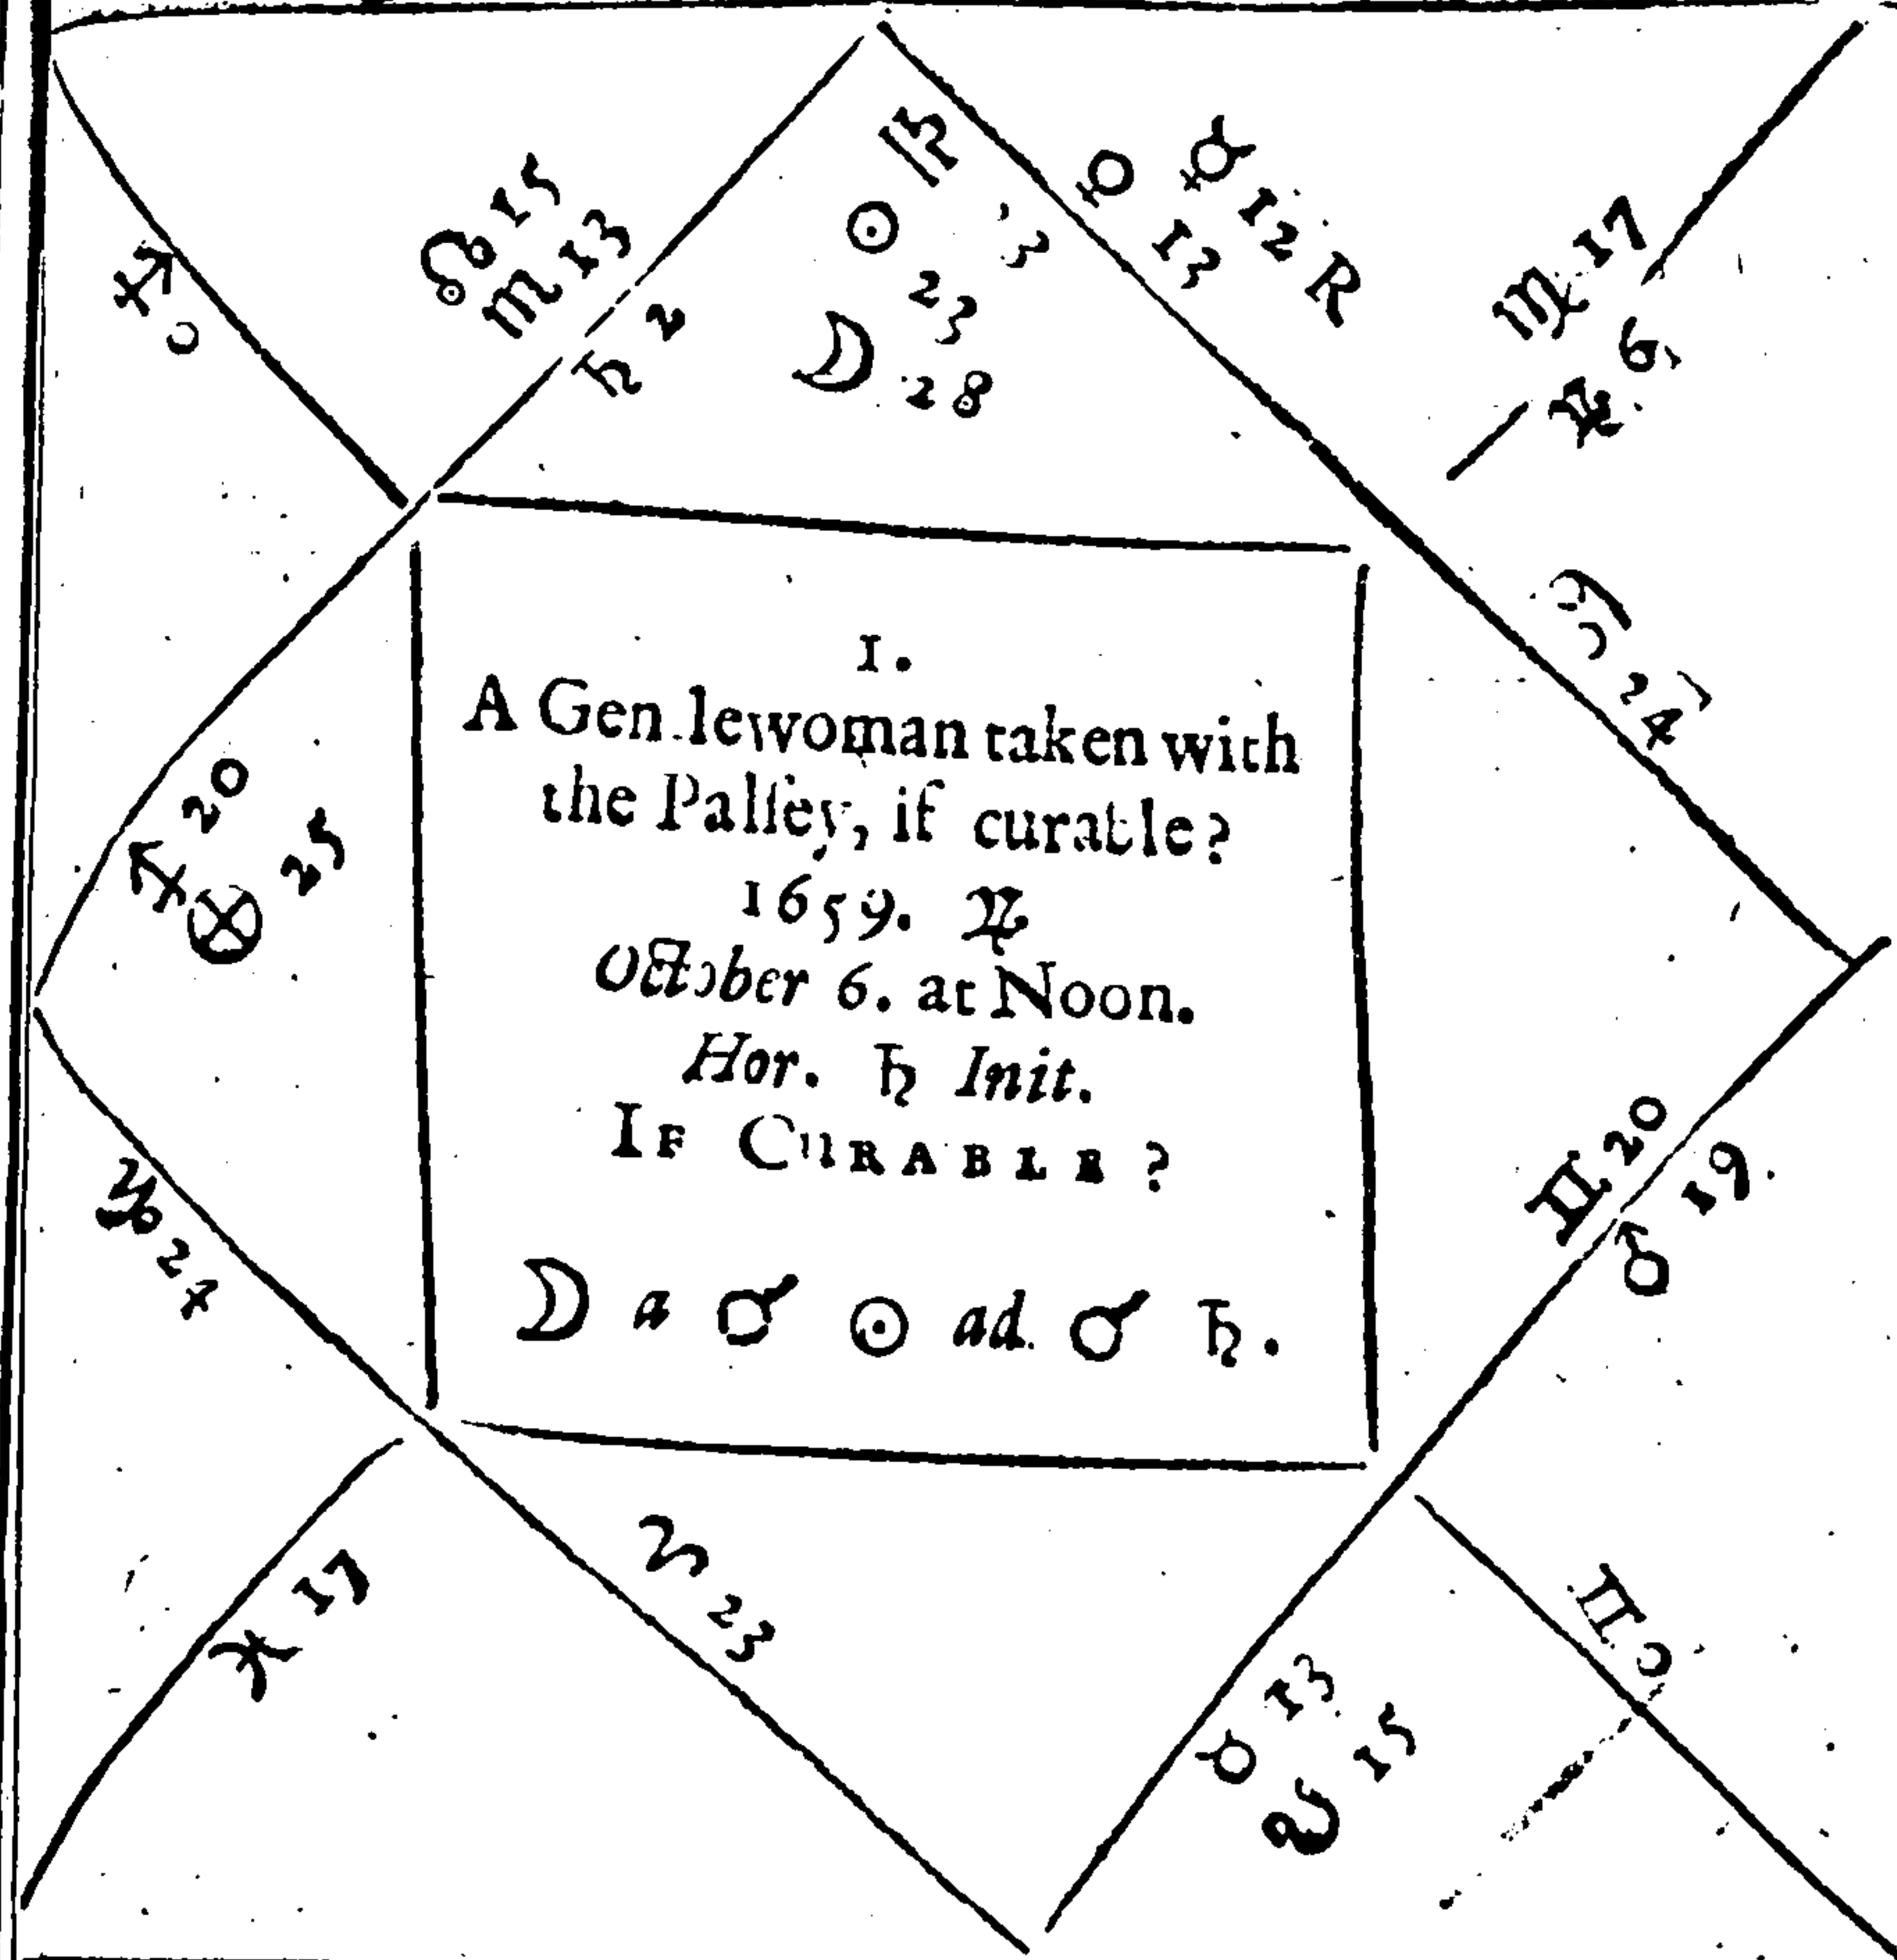

These few *Examples* serve to prove, that this *uncertain Star* hath a *certain order* to observe in his Motion: but not fully to demonstrate the exact regularity thereof: Nor can that well be done, unless we take notice of a *Circle of Instances* of this kind, containing 450 years; which according to *Cardan*, are the great *Years* of this *Erratique Star*: For here you see he some times performs such a progress once in six years, and other times once in seven years. And if you please to mind him in this his *Meander-Motion*, you'll find that he hath the like respect to all the other Signs as he hath to *Aries*, and after the same order.

Besides these, the gentle Planet *Venus* hath an unusual passage through *Virgo* this year, viz. from *June 25.* to *October 29.* *The Heavens and Stars speak more Languages than English: They are the best and most absolute Pedagogues under the Sun.*

Had some *Mercuries* but so much *News* to acquaint the *World* withal, *Four Quire of Paper* (as the *Learned Childrey* in another case observed) had been *too strait a Girdle* to contain their *Tympany*. And perhaps I may be censured for bringing such *Notions* into a contemptible *Almanack*, for furniture whereof, *Fairs, High-Ways, &c.* had been of much more use. But, for *Mercury in Aries two Months together!* The *World* will be nothing the wiser for that : And yet who knows but it may ? For it was long since prophesied

-----Percurrent multi, & augetur Scientia.

An Astrological Experiment of one tak'n with a Palsy,

THIS *Question* was proposed unto me within a few minutes after the Patient was struck with her Disease, so that the Figure of the *Question* and *Decumbiture*, are nearly the same. Her *Nativity* I could not procure; but her Disease was that *Palsey* which Physicians call *Paraplegia*, *sence* and *motion* being hurt in all parts of her Body. The Figure promiseth but *little hopes* of a cure, ♃ Lord of the Ascendant is in the Eighth in detriment, lately separated from a ☐♂, who partly opposes the *Horoscope*, and ☽ is combust in the combust way, near to ☿ an Enemy of health and life.--- ♀ Lord of the Disease is with ♀, near *Spica Mj*; and he disposing of ♃ declar'd the Disease to be rampant over Nature. ☿ governed the Hour.----Many Physicians were consulted with, and many *courses* of Physick were made use of, but still the Disease prevailed, until *May 4.* following; at which time the Moon was in ☿♂ on the Cusp of the Eighth in this *Lecculival Schem*, and then this *Querent Died*.
It

An Astrological Experiment, 1676.

It is generally found *fatal*, when the *Lord of the Ascendant* is in the *Eighth weak*, and disposed of by the *Lord of the Disease*; chiefly if the *Moon* be afflicted at the *same time*, as in this Instance.

Had I been consulted with for *Physick*, as I was about the possibility of her *Recovery*, I should have prescribed *Medicines* of the nature of the *Sun* and *Venus*; because both of them comfort the *Horoscope* from the *Angle* signifying *Medicine*. But yet I should scarce have been periwaded into the hopes of a *Cure*, by reason of the aforesaid Arguments against it. Albeit, I know that *Herbs* and *Plants* properly elected and applied, are greatly prevalent in *Physick*, But this is to be understood in *Curable Diseases only*. For it is not in the power of *Medicine* (be it never so excellent and vigorous) to make any Creature *Immortal*; or yet to preserve them beyond their appointed time.

A second Experiment Astrological, of a Gentlemans Leg cut off

An Astrological Experiment. 1676

THIS Gentleman (Mr. *Edmond Bostock* by name, one of the Farmers of the Excise, &c.) had the Misfortune to have his Leg, upon some trivial injury at first happening to it, to gangrene; and that to such a degree, that he was advised by his Physicians and Chirurgions to admit of a dismembring, in hopes to save his Life. And on *October* the 24. at the time above written, the fatal Action was performed. I call it fatal, in regard the Gentleman not only lost his Leg, but soon after his Life thereby also.

I will not dispute here, whether any Man doth die before his Glass be fully run, or that he hath finished his appointed number of Days; I only design to shew you the concordancy of Astrological Rules with our Temporary Actions and Passions, &c.

Here you may observe, That the Δ is in aspect of ζ Lord of the Eighth, in an obscure Angle of Heaven, and transfers his and the Suns Light to τ by a malicious Quadrate; enough to intimate the danger that succeeded upon so great an undertaking. But to add hereunto, the Action was performed in *hora Martis*, and $\♂$ ruled the Horoscope, and was with the *Pleiades* in $\♊$ Lord of the Fourth posited in the Ascendant. I need not quote Authorities to vouch an Experiment so plain: All Persons acquainted with Astrology will meet satisfactory Reasons of the Fatality that did attend it; the Patient dying thereof in few days after.

I happened to be at the Royal Coffee-house in a day or two after the Action was performed ; and being in the company of sundry honourable Persons, many of which were my very good Friends, I enquired the time when it was done, and having obtained it, at the command of some of them, gave my opinion, *That the Action would prove Merit*, for the fore-mention'd Reasons. At which my Judgment sundry of the company were very much troubled ; Mr. Bosstock being (in his life-time) a Person of a great deal of worth , and generally well-respected : and his immature Death was and is likewise much lamented.

THe True English Interest: In some Political Observations demonstrating an infallible advance of this Nation to infinite Wealth and Greatness, Trade and Populacy, with Employment and Preferment for all Persons: An excellent Work. Written by *Carew Reynel Esq;* Sold by *G. Widdows* at the green Dragon in *St. Paul's Church-yard*: Where *Mr. Edmund Buckworth's* Lozenges are to be had.

THe Ingenious Reader is desired to take notice, That if any other Almanack for 1676. come abroad under the Name of *TRIGGE*, than that which is Printed at *Westminster*, for the Assigns of *John Seymour Esq;* it is not written, nor yet published by the consent of the same Person that hath ever yet wrote it and gave it a Name and Credit in the World: And therefore if any folly or falshood appear in it (as in Counterfeits is very common) the said Person prays to be excused from being thought to have a Hand therein; for none but the *TRIGGE* Printed at *Westminster* will be owned by the true and rightful Author of *Trigge's Almanack*.

IN my *Obsequium Rationabile*, or Defence of *Scarpio*, p. 116. in the Geniture of *Eichstadius*, the places of ♀ ♂ are mistaken, as being put in *m*, when-as in truth they are in *My*. But the Printer of that Book being unacquainted with Works of that nature, hath, not only bin guilty of that Error of Transposition, but of many other literal Errors likewise, which are not met with in the Errata; which as well for his, as my own credit, I do request the Judicious Reader to amend with his Pen as he meets with them. By which civility he will very much oblige both the Printer and Author of that Book.
